Краткое описание Просмотр пристатейных ссылок (15)

Attitude to nature is the basic value of the peoples of Eurasia. This is especially clearly manifested in the example of land use. The development of virgin lands in the adjacent territories of Russia and Kazakhstan led to the solution of the food problem, but with social and environmental consequences. Violation of the traditional integrity of human and natural being lies at their core. The authors argue that it is possible to restore the proportionality of their coexistence, including through the introduction of innovative farming methods as the basis for sustainable development of agricultural territories. © 2019 IOP Publishing Ltd.
